An Index of U.S. Voluntary Engineering Standards

Supplement 1

William J. Slattery, Editor

This supplement contains the permuted titles of more than 6,300 standards, specifications, test methods, and recommended practices published by 225 U.S. technical societies, professional organizations and trade associations. Each title can be found under all the significant key words which it contains. These key words are arranged alphabetically down the center of each page together with their surrounding context. The date of publication or last revision, the standard number and an acronym designating the standards-issuing organization appear as part of each entry.

Key words: Engineering Standards, index of; index of standards, recommended practices, specifications, test methods; Key-Word-In-Context index of voluntary standards; standards, voluntary, index of.

1. Introduction

This supplement to NBS Special Publication 329 contains the permuted titles of more than 6,300 voluntary engineering standards, specifications, test methods, and recommended practices published by 225 U.S. technical societies, professional organizations, and trade associations. The titles listed fall into three categories: (1) those published between January 1, 1970, and December 31, 1971; (2) those erroneously omitted from SP 329; and (3) those published prior to 1970 but not on file with the Engineering Standards Information Center at the time of publication of SP 329.

The Engineering Standards Information Center, formerly the Information Section of the Office of Engineering Standards Services, continues to serve as a technical library and referral activity. Inquirers may write or visit the Center which is located in the Technology Building, Room B151, NBS, Gaithersburg, Maryland; or call on Area Code 301–921–2587. Comments or suggestions concerning this supplement of SP 329 are welcome, and should be sent to the editor, Engineering Standards Information Center, Technology Bldg., B147, National Bureau of Standards, Washington, D.C. 20234. To be placed on the announcement list of future supplements, please fill out the tear sheet at the end of this Index.

This supplement differs from SP 329 in the following respects:

- a. The acronyms which are used to designate the standards-issuing organization in the accession number contain up to 5 letters instead of 3 letters, the maximum in SP 329. This permits the use of acronyms which, in most cases, are identical with the acronym used by the organization.
- b. For the purpose of identifying those standards which have not been assigned a number by the issuing organization but have been given a number by the Center for retrieval purposes, an asterisk (*) has replaced the XYZ designation used in SP 329.
- c. A "stop" list has been added. This list contains over 400 words which do not appear in this supplement as key words because they are meaningless for searching purposes; for example, "and," "for," "characteristic," "general," and "method."
- d. This supplement provides an alphabetical listing of the standards-issuing organizations by organization name in addition to the listing of the organizations by acronym.
